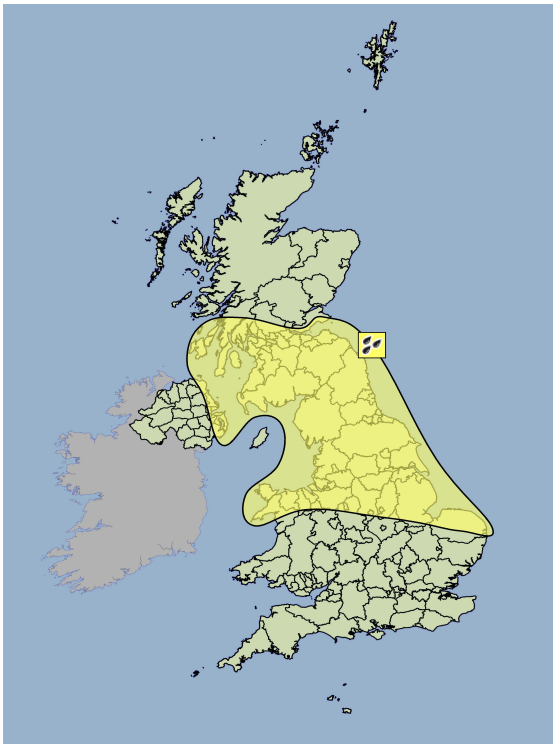
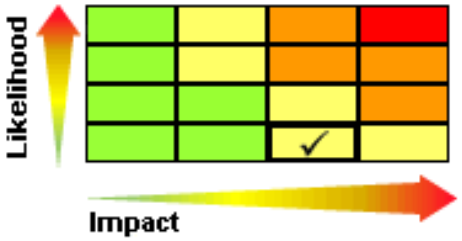
National Severe Weather Warning Service





Chief Forecasters Assessment
Warm, humid air, originating from France and Spain, is moving northwards across the UK. Within this air mass, heavy, thundery downpours are breaking out as expected. Some places within the broad warning area will miss the worst of the storms, but where they occur they could produce in excess of 20 mm of rain in an hour, with one or two places perhaps seeing more than 40 mm within 2 or 3 hours, with localised flooding a possibility.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **12:15 on Sat, 07th Jun 2014** until **21:00 on Sat, 07th Jun 2014**

Areas of heavy, thundery rain will continue to move northwards across many parts of the UK during Saturday.

The public should be aware of the potential for localised flooding due to the intensity of the downpours.

This is a further update to the warning to remove more of southern Britain, where conditions continue to improve. This improvement will extend its way northeastwards across central and northern England through the rest of this afternoon and evening, although isolated thundery showers will still affect some areas.
